

Soft Inductive Tactile Sensor Demo

FUTURE CHANGES DOCUMENT

BY JAMES KINCH

Introduction

The purpose of this document is to provide a list of the future changes required to be made to the Soft Inductive Tactile Sensor Demo to get it into a fully functional state. As is shown in the image below, there are a number of components that still need to be fitted, as these were unavailable during the original construction of the demo rig.

Required Changes List

This is a list of all of the required changes needing to be made to the demo rig (given in sequential order):

- 1) **Change demo name etching on the top plate:** the top plate was manufactured before the name of the demo was known and therefore, the name given of 'Inductive Coil Soft Sensor' is no longer correct. This should be replaced with 'Soft Inductive Tactile Sensor'.
